                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This sequence represents human complement receptor 1 (CR1, CD 35) N-terminal fragment. The invention relates to a soluble derivative (A) of a soluble polypeptide (I), which comprises at least 2 heterologous membrane-binding elements (MBE) of low membrane affinity covalently associated with (I). MBE interact, independently and with thermodynamic additivity, with components of cellular or artificial membranes exposed to extracellular fluids. (A) are used to treat disorders treatable with (I) itself, specifically inflammation or any other complement-related disorder (e.g. neurological disease, graft rejection, myocardial infarction, sepsis, rheumatoid arthritis and many others; including application to indwelling devices) and thrombolytic disease, but also to treat allergy, induce weight loss, to treat ischaemia or asthma and as immuno-modulators for treating multiple sclerosis. (A) are administered artilly to constant.
                                                                                                                                                                                                            C3B/C4B receptor; CR1 protein; cell-surface protein; erythrocyte; human; complement regulatory activity; complement pathway enzyme; tissue damage; reperfusion injury; Arthus reaction; myocardial infarct; inflammation;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            orally, topically, by injection or inhalation at 0.01-10 (preferably 0.1-10) mg/kg/day.

The CRI protein and its fragments can also be used in the treatment of conditions which involve unwanted complement activity, e.g. shock lung, tissue damage due to burn, or ischemic heart conditions, and autoimmune disorders. CRI proteins, analogues, derivatives, and anti-CRI antibodies are used in assays, and diagnostics. The present sequence represents the human CRI activity.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           protein or fragment is expressed as a cell-surface protein on the surface of a non-human cell and exhibits a complement regulatory activity of full length human CRI as expressed on erythrocytes. The CRI function in vivo may be mediated through the inhibition of complement pathway enzymes. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a human C3B/C4B receptor (CR1) protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Disclosure; Fig 1A-P; 87pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    cardiant activity

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This is full-length CR1 protein, and shortened forms are new, lacking the transmembrane region. The proteins and fragments bind C3b and/or C4b, have cofactor activity and inhibit C3 and C5 convertase activity. In the sequence, x=untranslated region. This has 7 short consensus repeats (CR) of 4 long direct homologous repeats (LHR) (see fig. 10 in patent). Deletion mutants, eg LHR-A for binding of C4b, and LHR-C for C3b binding, be made, and LHR-B and -C can detect CR2 sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      patent).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CR1-4 (114S) analogue
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            19-MAR-1993 (first entry)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     R28560 standard;
                                                                                                                                                                                                                                                                                                                                                                      Complement activity regulator protein analogues - useful for treating auto:immune diseases, to suppress transplant rejection,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Misc-difference
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Region
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Region
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Homo sapiens.
                                                                                                                                                   specified substitution variants of it are claimed in which certain positions in SCR-2 which have been identified as important for the degree of C3b- and C4b-binding are substituted by amino acids from the corresponding positions in SCR-9. The specification does not contain the CRI-4 sequence; the sequence given here was constructed from the full-length CRI amino acid sequence having GENESEQ
                                                                                                                                                                                                                                        The cDNA clone designated CR1-4 was described in J.Exp.Med.(1988) 168:1255-1270. It encodes the first 8 and a half amino terminal SCRs of CR1. The invention concerns analogues of "regulator of complement activation" proteins or truncated, hybrid or recombinant forms of them. CR1-4 is a preferred truncated form and a number of

                                                                                                                                                                                                                                                                                                 CR1-4 (64K) analogue.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           168:1255-1270. It encodes the first 8 and a half amino terminal SCRs of CRl. The invention concerns analogues of "regulator of complement activation" proteins or truncated, hybrid or recombinant forms of them. CRl-4 is a preferred truncated form and a number of specified substitution variants of it are disclosed in which certain positions in SCR-5-6 are substituted by amino acids from the corresponding positions in SCRs which are involved in C3b- and C4b-binding. The substitution variant given here has increased C3b-binding. The substitution variant given here has increased C3b-binding. The specification does not contain the CRl-4 sequence; amino acid sequence having GENESEQ accession number R11810 and descriptions in the disclosure.
                                                                                                                                                                                                                                                                    short consensus

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            specified substitution variants of it are claimed in which certain positions in SCR-2 which have been identified as important for the degree of C3b- and C4b-binding are substituted by amino acids from the corresponding positions in SCR-9. The specification does not contain the CRI-4 sequence; the sequence given here was constructed from the full-length CRI amino acid sequence having GENESEQ accession number R11810 and descriptions in the disclosure.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The CDNA clone designated CR1-4 was described in J.Exp.Med.(1988) 168:1255-1270. It encodes the first 8 and a half amino terminal SCRs of CR1. The invention concerns analogues of "regulator of complement activation" proteins or truncated, hybrid or recombinant forms of them. CR1-4 is a preferred truncated form and a number of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Claim 11; Fig 2 and R11810; 23pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Searched:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Scoring table:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Perfect score:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
   Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

```
TVISUALIZATION OF human C4b-binding protein and its complexes with visualization of human C4b-binding protein and its complexes with vitamin K-dependent protein S and complement protein C4b.";

LPTOC. Natl. Acad. Sci. U.S.A. 80:3461-3465(1983).

C -!- FUNCTION: C4BP CONTROLS THE CLASSICAL PATHWAY OF COMPLEMENT C4B. IT COMPLETOR THEN HYDROLYZES THE COMPLEMENT FRAGMENT C4B. IT CASINAL, WHICH THEN HYDROLYZES THE COMPLEMENT FRAGMENT C4B. IT COMPLEX CCI. ALSO ACCELERATES THE DEGRADATION OF THE C4BC2A COMPLEX (C3 CONVERTASE) BY DISSOCIATING THE COMPLEMENT FRAGMENT C2A. ALPHA CHAIN SINDS C4B. IT INTERACTS ALSO WITH ANTICOAGULANT PROTEIN S CONVERTANCE DETO. LINKED COMPONENT.

C -!- SUBUNIT: DISULFIDE-LINKED COMPLEX OF C4BP ALPHA AND BETA CHAINS OR A 530 KDA HOWOHEPTAMER OF ALPHA CHAINS OR A 500 KDA COMPLEX OF ALPHA CHAINS OR A 500 KDA CHAINS AND 1 BETA CHAIN. THE CENTRAL BODY OF THE ALPHA CHAINS OR A 500 KDA CHAINS AND 1 BETA CHAIN.

"Bovine C4b binding protein. Molecular cloning of the alpha- and RT "Bovine C4b binding protein S.";

RT formation with protein S.";

RI J. Immunol. 153:4190-4199(1994).

CC C. FUNCTION: C4BP CONTROLS THE CLASSICAL PATHWAY OF COMPLEMENT CC. ACTIVATION. IT BINDS AS A COFACTOR TO C3B/C4B INACTIVATOR C4B. CC. (C3BINA), WHICH THEN HYDROLYZES THE CABCEMENT FRAGMENT C4B. IT CC. ALSO ACCELERATES THE DEGRADATION OF THE C4BC2A COMPLEX (C3 CONVERVASE) BY DISSOCIATING THE COMPLEMENT FRAGMENT C2A. ALPHA CC. CHAIN BINDS C4B. IT INTERACTS ALSO WITH SERUM AMYLOID P COMPONENT. CC. SIBUNIT: DISULFIDE-LINKED COMPLEX OF C4BP ALPHA AND BETA CHAINS CC. (BY SIMILARITY: TO C4BP BETA CHAIN AND TO PIG APOLIPOPROTEIN R.

CC -: SIMILARITY: CONTAINS 8 SUSHI (SCR) REPEATS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Q28065;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  FUNCTION: C4BP CONTROLS THE CLASSICAL PATHWAY OF COMPLEMENT ACTIVATION. IT BINDS AS A COFACTOR TO C3B/C4B INACTIVATOR (C3BINA), WHICH THEN HYDROLYZES THE COMPLEMENT FRAGMENT C4B. I ALSO ACCELERATES THE DEGRADATION OF THE C4BC2A COMPLEX (C3 COMPLETANDES) BY DISSOCIATING THE COMPLEMENT FRAGMENT C2A. ALPHA CHAIN BINDS C4B. IT INTERACTS ALSO WITH ANTICOAGULANT PROTEIN AND WITH SERUM ANYLOID P COMPONENT.

SUBJUNIT: DISULFIDE-LINKED COMPLEX OF C4BP ALPHA AND BETA CHAIN SUBJUNIT: TO C4BP BETA CHAIN AND TO PIG APOLIPOPROTEIN R.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     s SWISS-PROT entry is copyright. Blochemistry 26:4668-4674(1987).

FUNCTION: C48P CONTROLS THE CLASSICAL PATHWAY OF COMPLEMENT ACTIVATION: OTHER HINDS AS A COFACTOR TO C3B/C4B INACTIVATOR

(C3BINA), WHICH THEN HYDROLYZES THE COMPLEMENT FRAGMENT C4B. IT ALSO ACCELERATES THE DEGRADATION OF THE C4BC2A COMPLEX (C3 CONVERTASE) BY DISSOCIATING THE COMPLEMENT FRAGMENT C2A. ALPHA CHAIN BINDS C4B. IT INTERACTS ALSO WITH SERUM AMYLOID P COMPONENT.

-I. FUNCTION: RECEPTOR FOR COMPLEMENT C3D. PARTICI LYMPHOCYTES ACTIVATION.

-I. SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.

-I. SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.

-I. SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.

-I. SIMILARITY: TO HUMAN C3D/EBV RECEPTOR (CD21).

-I. SIMILARITY: CONTAINS 15 SUSHI (SCR) REPEATS.

Hum. Mol. Genet. 7:1277-1284(1998).

-i. FUNCTION: CA(2+)-DEPENDENT RECEPTOR FOR MYELOID CELLS THAT BINDS

TO CARBOHYDRATES ON NEUTROPHILS AND MONOCYTES. MEDIATES THE

INTERACTION OF ACTIVATED ENDOTHELIAL CELLS OR PLATELETS WITH

LEUKOCYTES. THE LIGAND RECOGNIZED IS SIALYL-LEWIS X.

-i. SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.

-i. TISSUE SPECIFICITY: STORED IN THE ALPHA-GRANULES OF PLATELETS

AND WEIBEL-PALADE BODIES OF ENDOTHELIAL CELLS. UPON CELL
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Protein

SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.

POLYMORPHISM: A POLYMORPHISM IN POSITION 149 IS ASSOCIATED WITH POLYMORPHISM: A POLYMORPHISM IN POSITION 149 IS ASSOCIATED WITH HIGHER RISK OF CORONARY ARTERY DISEASE (CAD). A SIGNIFICANTLY HIGHER MUTATION FREQUENCY (ARG-149) IS OBSERVED IN PATIENTS WITH ANGIOGRAPHICALLY PROVEN SEVERE ATHEROSCLEROSIS COMPARED WITH AN UNSELECTED POLYMING (SER-149).
                                                                                                                                                                                                                                                                                                                                                                                                   , M30640; AAA52377.1;
